

EAGLE LED lighting system

EAGLE Indoor LED lighting system

Eagle lighting systems offer a new and sleek solution for ambient internal lighting by way of an extruded aluminium channel housing a double row of low voltage LED strips and softened by an acrylic diffuser panel. Extrusions may be installed as a single row or doubled up for increased brightness and may be suspended from the ceiling or flush mounted.

EAGLE lighting systems combine the efficiency of low voltage LED with an architectural elegance hitherto not seen.

The system offers countless options and variations:

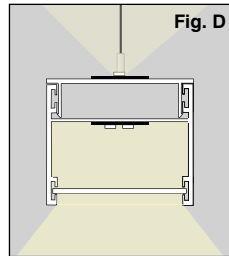

- Channels are available in lengths up to 5.6m with diffuser to match.
- Channels come standard in natural anodised aluminium but may be powder coated on request (POA).
- System may be flush ceiling mounted (*Fig. A*) or suspended via sleek suspension componentry
- Channels may be installed individually or in pairs (*Fig. B*)
- Optional Low voltage LED downlights may be installed along the length of the diffuser to provide feature lighting (*Fig. C*)
- Optional LED strip may be fixed to top channel cover to provide subtle uplighting (*Fig. D*)

EAGLE 2 - double row

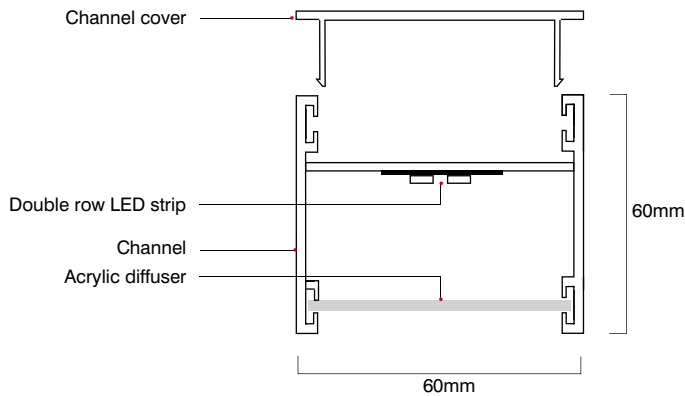

LED downlights installed to augment lighting

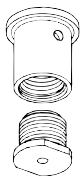

LED strip on channel cover provides uplighting

BASIC COMPONENTRY

COMPONENTRY FOR SUSPENDED INSTALLATION

Ceiling attachment

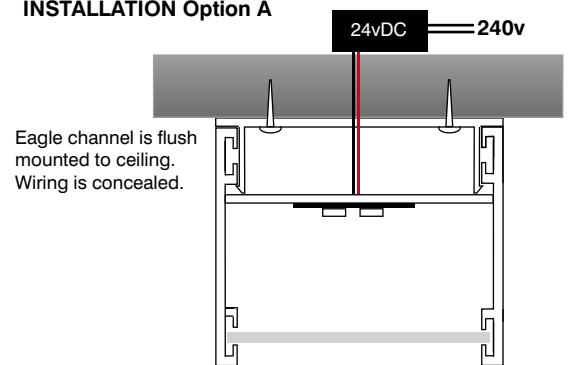

Griplock cylinder

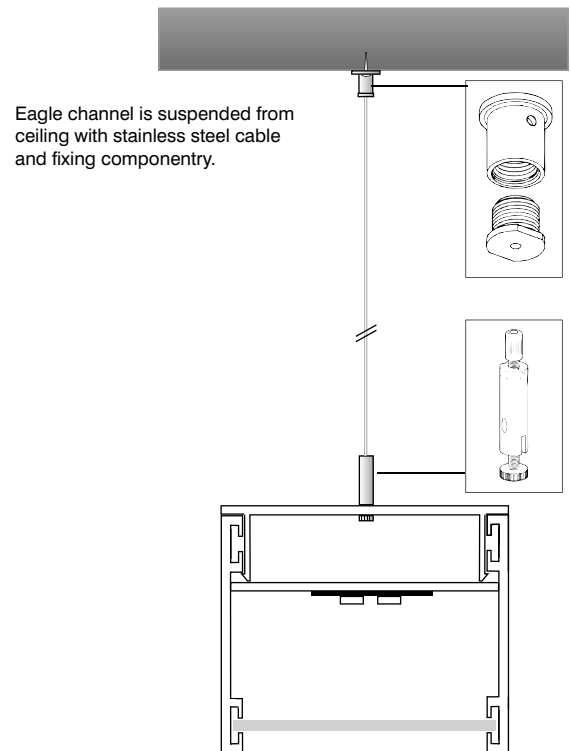

Stainless steel cable

INSTALLATION Option A

INSTALLATION Option B

Description	Part No.
LEEFCW	LED extrusion flush mount – Cool White
LEEFWW	LED extrusion eagle flush mount – Warm White
LEESCW	LED extrusion Eagle suspended – Cool White
LEESWW	LED extrusion Eagle Suspended – Warm White
LEESCW+U	LED extrusion Eagle Suspended – Warm White+Uplight
LEESWW+U	LED extrusion Eagle Suspended – Cool White+Uplight

Technical Data

Lumens per meter - Cool white	2100Lm
Lumens per meter - Warm white	1900Lm
Watts per meter at 24V DC	32W
